

Hector's World™

Computer Security: Keep Yourself Switched On

Music & Lyrics by Dean Saunders

While on the net, you've gotta keep yourself switched on.
Keep your password secret, keep it safe and make it strong.
Letters, numbers and symbols, you can mix them around,
so no-one can guess your password and your info's safe and sound.
While on the net, you've gotta keep yourself switched on.

Before you download anything, check with an adult you trust.
Someone who really cares about you will help you get it sussed.

Some people may try to trick you when you're online
but learn from Hector and his friends and you'll be just fine.
While on the net, you've gotta keep yourself switched on.

You know there's viruses, loggers, webcam capture and trojans,
spyware, malware, rootkits, botnets and adware,
phishing and pharming, spamming and worms,
take care, be aware.

Make sure the things on your computer that are important to you
are backed up and safely stored away – here's a clue;
regular backups and virus updates are the trick
to protect what you care about and keep your computer from getting sick.
While on the net, you've gotta keep yourself switched on.

You know there's viruses, loggers, webcam capture and trojans,
spyware, malware, rootkits, botnets and adware,
phishing and pharming, spamming and worms,
take care, be aware.

While on the net, we've gotta keep ourselves switched on.
While on the net, we've gotta keep ourselves switched on.
